

SOFTWARE

SOFTWARE

VueTronic ships our products with BrightSign players however if you have another content player that you require, we would set it up and ensure it works seamlessly with our products.

TECHNICAL SUPPORT

Our team offers software training on content uploads, set up and scheduling customized to your needs. We also offer technical support and trouble shooting for the lifetime of your screen.

VueTronic LED Digital Displays can run any software of choice.

We have two that we use regularly, depending on the client & their requirements:

BrightSign

BrightSign® is the global market leader in digital signage media players, offering the most reliable, secure, and sophisticated solid-state media players on the market today. www.brightsign.biz.

BrightSign® is a free software that runs on your network. If you want to update your creative from anywhere in the world, they have a subscription service called BSN Cloud that costs about \$139.00 USD/\$198.00 CND per year (or about \$17/month) current market rates apply. www.brightsign.biz.

ViPlex Handy is a free mobile app developed by NovaStar for managing LED display systems with Taurus players, by using just a cell phone, I-pad, or tablet. Extremely easy to use, upload content from your camera roll in .jpg format and publish to the screen. User must be in close proximity to the sign to update and manage content.

*Whichever software solution you choose, **VueTronic** will train your client how to upload and manage their display and assist with any special brightness/scheduling requirements.*
